Neuropsychology of Language, Reading and Spelling Sep 21 2019 Neuropsychology of Language, Reading, and Spelling explores the many neural systems and subsystems that contribute to the production and comprehension of oral and written language. This book is organized into five parts encompassing 12 chapters that emerged from the 1980 International Conference on the Neuropsychology of Language, Reading, and Spelling, sponsored by the Program in Neurosciences and Education at Teachers College, Columbia University. This conference highlights the neurological and behavioral interrelatedness of language, reading, and spelling. After briefly dealing with the cognitive and language development, as well as learning to read and to spell as instances of acquiring skill, this book goes on discussing the activity of the learner in the development skill, the influence of interacting forces in the developing nervous systems, and the role of peripheral mechanisms in the development of speech and language. A chapter examines the central integrative mechanisms, specifically the electrophysiological research with infants on the dependence of language perception on multidimensional, complex processes, and not solely as a left- or right-hemisphere task. This chapter also provides evidence of discrete localization of language processes within the dominant hemisphere at both cortical and subcortical levels. The final four chapters are devoted to an analysis of developmental disorders from the varied perspectives of neurology, linguistics, neuropsychology, and education. This book will be of value to neuropsychologists and developmental biologists.

A Beginner's Guide to Tibetan Buddhism Nov 04 2020 Uncover the nature of the mind with this ground-level, practice-oriented presentation of Tibetan Buddhism. What works in early reading materials Nov 23 2019 Access to books is key to learning to read and sustaining a love of reading. Yet many low- and middle-income countries struggle to provide their students with reading materials of sufficient quality and quantity. Since 2008, RTI International has provided technical assistance in early reading assessment and instruction to ministries of education in dozens of low- and middle-income countries. The central objective of many of these programs has been to improve learning outcomes—in particular, reading—for students in the early grades of primary school. Under these programs, RTI has partnered with ministry staff to produce and distribute evidence-based instructional materials at a regional or national scale, in quantities that increase the likelihood that children will have ample opportunities to practice reading skills, and at a cost that can be sustained in the long term by the education system. In this paper, we seek to capture the practices RTI has developed and refined over the last decade, particularly in response to the challenges inherent in contexts with high linguistic diversity and low operational capacity for producing and distributing instructional materials. These practices constitute our approach to developing and producing instructional materials for early grade literacy. We also touch upon effective planning for printing and distribution procurement, but we do not consider the printing and distribution processes in depth in this paper. We expect this volume will be useful for donors, policymakers, and practitioners interested in improving access to cost-effective, high-quality teaching and learning materials for the early grades.

House Histories for Beginners Jan 18 2022 Popular television programmes highlight the satisfaction that can be gained from investigating the history of houses, and there is always plenty of interest in the subject, with archives becoming ever more accessible with access to the internet. As the subject covers a broad field, the authors have set out to include advice on those aspects that usually apply to a project and others that will be of particular use for beginners. The reader is guided through every stage of research, from the first exploration of the archives to the completion of the task. Suggestions are also included on how to present the findings – a house history makes a very attractive gift. The authors describe how to deduce the age of a property (it is very seldom directly recorded when a house was built) and characteristics of research on particular types of property – such as cottages, manor houses, inns, mills, former church properties, and farms – are discussed. In one example, research demonstrated that a farm was likely to have been a Domesday manor – a fascinating discovery achieved using records accessible to any beginner.
